

Hexo+

Your Self-Flying Camera

Easily create amazing
footage of yourself,
hands-free

No Piloting Involved, at All

- >> Yes, Hexo+ flies itself. From the moment you pick your camera movement everything simply happens, automatically: Takeoff, flight trajectory, landing and constant framing are all taken care of, so you can enjoy the moment, hands-free.

Create Awesome Aerial Footage

- » Hexo+ lets you create amazing videos of yourself from above, with only a couple of taps on your smartphone. We combined a fast and responsive drone, a 3-axis gimbal, predictive tracking algorithms and a camera movement-packed mobile app to let you produce beautiful, perfectly framed and stabilized aerial images.

Perfect Tracking

- >> Our proprietary framing and tracking algorithm enables constant tracking and framing stability. Hexo+ connects to your phone via Bluetooth then uses data fusion algorithms to establish your position based on your GPS position and phone sensors.

Take it Anywhere

- >> Born of action sports, we created a drone as compact as possible, with removable propellers, feet and gimbal to let you move around freely. Designed for performance, Hexo+ flies up to 45 mph - 70 km/h to keep up with speedy descents and strong winds.

1 Get the app
on your smart
phone

2 Select your
camera
movement

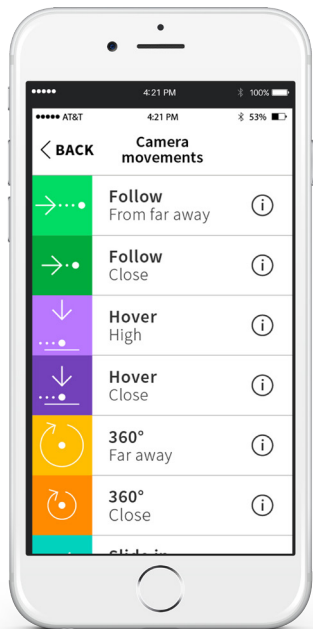

3 Start the
action

Easy
to Use

>> From removing the need for a remote control by using your smartphone, to automated flight and framing, we refined each and every detail of the experience to make sure filming from the sky is actually fun and easy, right out of the box.

Completely Self-Flying

Our app makes automated flight extremely simple. Take off, flight and landing, all happens with a simple tap on your smartphone.

Built-in Camera Movements

Hexo+ app contains dozens of cinematic camera movements created by motion picture experts.

Follow

Hexo+ will follow you and keep you framed as you move. Simply select the relative position of the camera.

360

Hexo+ will revolve around you and constantly frame you—you decide when it stops orbiting. It is the ultimate aerial selfie.

Slide in/out

Hexo+ will fly towards you or away from you while maintaining a constant altitude. A great dolly shot.

Hover

Hexo+ will hover steadily above you and keep you framed as you move. Perfect above a jump for instance.

Slide sideways

Hexo+ will slide along an imaginary rail while aiming at you. Well-suited for awesome backdrops.

Fly in/out

Hexo+ will fly upwards or downwards while framing you. Works well to create a dramatic reveal shot.

Product Features

Futureproof: quarterly app and firmware updates

Durable design, fits on your backpack

Over 80 Custom Camera Movements

10 to 15 minutes of flight time

3-Axis gimbal, for state of the art image stabilization

GoPro® Compatible (Hero 3, 3+, 4)

Tool-free removable props, feet and gimbal

5-seconds battery replacement

**45
MPH**

45 mph max speed
